THE POWER OF INNOVATION

NETWORK PERFORMANCE MONITORING

Gain complete visibility into work of ICT infrastructure and business services and insure that impact on key business processes is reduced to minimum

KEY INSIGHTS

- Visually detect severity and impact of recorded events
- Performance monitoring of network, data center and end point devices
- Drill down and troubleshoot problems in (near) real time
- Adaptive reporting for audit purposes
- Based on trusted Nagios technology

COMPLIMENTARY SERVICES

- ICT audit and estimation
- Infrastructure consolidation
- IT support in resolving incidents
- Complete ICT infrastructure maintenance
- Planning and infrastructure design

NETWORK PERFORMANCE MONITORING

Real time monitoring

Track changes in your ICT environment as they happen

False positive elimination

Reduce staff interventions by eliminating false alarms

Customized visualization

Display the monitored servers either geographically, by function, service or any other principle according to requirements

Hypervisor monitoring

Make sure your virtual environment is used efficiently and plan future capacity expansions

One solution for many users

Define what is important for each user and provide them with all relevant data

System notifications

You will know each time there is an event worth of your attention with hierarchy based notification system

Reporting

Create reports both for internal use and for audit processes
